Subject: for our 11 am catch-up re this week's trip
[Haystack area map.jpg](#)
[Haystack structure replacement.docx](#)
[Haystack mines tour August 2014.docx](#)
[Haystack No.1 SAP Draft 0801.pdf](#)
[atvs@haystack.jpg](#)

Will describe this all more at our 11 o'clock but the first three are docs that Linda prepared for the tour we did for Robin from HQ Wed. morning. The fourth is the draft sampling and analysis plan for the removal assessment which was being done for Haystack #1, Section 24, and Bebo Trespass. And the last is a picture of Randy and two OSCs from other regions with the ATVs that they equipped with telemetry, radiation measuring equipment, and GPS. I'm copying Wilson because he saw the beginning of the process of putting on the equipment on the ATVs but didn't see the final product. He's WAH today-- we can catch up with him re the Cove trip next week.

And it would be great to go over what each of us knows at this point about all the systems we have for storing AUM data at 11—I learned new things about 1, 2, 4 and 5 below through talking to Linda and Randy (I'm guessing you already know most of that info!):

1. ULEP
2. Randy's database
3. ZiZi and Amanda's work with Mo
4. Atlas GIS data
5. Linda's database

Linda said she's going to check in with everyone on whether our Navajo Team meeting on Sept. 2 would be a good time for discussing our data consolidation needs...

Talk soon!
